

Region 3 GPRA Baseline RCRA Corrective Action Facility

Gulf Oil Corporation

**632 N. Cannon Avenue
Lansdale, PA 19446
Congressional District 13
EPA ID #: PAD014304976
Final Update**

Current Progress at the Site

This 12 acre facility is one of EPA Region III's high priority RCRA corrective action sites. EPA determined on September 29, 1994 that both the Human Exposure and Groundwater Environmental Indicators have been met.

No further action is needed at this former facility. The facility is now subdivided into three (3) properties. Soil sampling confirms that the soils at the former facility do not require corrective action. Groundwater contamination exists beneath the facility but it did not originate from the former facility. The contamination is part of a wide-spread groundwater contamination plume, primarily TCE and PCE, that exists beneath this area of Lansdale. Superfund is handling the contaminated groundwater as part of the North Penn Area 6 Site study

Site Responsibility

Superfund is handling the contaminated groundwater as part of the North Penn Area 6 Site study.
